

Function

The ESL water level sensor is adaptable to most junction boxes for varied applications and conditions. Sensors can be used for quick fill and/or safe-off functions on pools where level controls either were not provided or are no longer functional.

Specifications

Construction of sensor enclosure shall be cast bronze and brass with neoprene moulded seal. Sensor shall be reed switch enclosed in a polypropylene, magnetically actuated float with 1" level adjustment.

Junction box connection: 1/2" n.p.t./b.s.p.

Voltage and current ratings:
24 VAC/DC, 0.28A

Notes

1. UL and ULC listed.
2. For use in Class 2 circuits only.
3. Wiring methods must comply with Class 3 or better circuits.
4. Custom sizes available upon request.
